

# UNILIFT 870

The kitchen appliance lift can be used for many duties. Principally for lifting various types of food processing machines. But also for soft drinks crates, microwave ovens and other things.

The lift moves quickly but quietly and comes up to a comfortable working height, without strain on the user. The lift is operated by a manual control unit that can be located wherever required and secured in place by means of Velcro tape discs.

Unilift inside the cabinet.

You can stop the height adjustment when the height suits you.

Unilift in the upper position.
