

# SLIMLIFT 6250

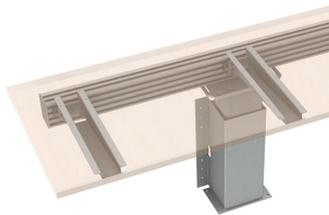

SLIMLIFT 6250 is a wall mounted worktop lift with great flexibility to be adapted for different needs. The equipment in the work surface is selected according to the function desired. A sink unit and hob can be integrated in the worktop.

The lift can be used separately or together with Granberg's wall cabinet lift to totally adapt the kitchen. Space is left open below the work surface for knees and legs. If necessary installations below the work surface, (motors, water, drainage), can be concealed by telescopic cover plates that give the kitchen an attractive appearance.

The motors are continuously adjustable and move the work surface quickly and silently to the required height. The lift can be equipped with a reliable safety system that guarantees safe operation with no risk of crushing.

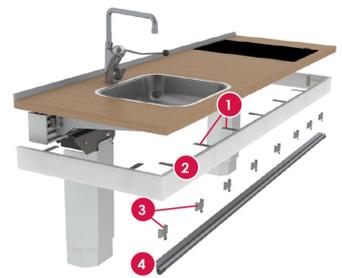

When Slimlift is used together with a hob, a working area is formed with a low construction height, providing a good position for seated work.

The worktop is allowed to protrude 10 cm on each side. This makes it simple to adjust to adjacent fixtures. The bracket is adjustable laterally.

When Slimlift is used together with a sink unit, it is recommended to cover the lift with fronts at a height adapted to the sink's depth.

Fronts for enclosing washing-up sinks are fitted with border fittings. 1) Border fitting 2) Front border 3) Attachment for safety switch 4) Safety switch

Slimlift can be used as a vertically adjustable working area from both sitting and standing position.
